Technoble celebrates its 60th anniversary

Accelerating sustainability actions with a focus on the next generation, including the start of operations at the Science Park Kyoto, a production base, as a plant for manufacturing COSMOS-certified products, the global standard for organic cosmetic ingredients.

Plan to increase the conversion of production electricity consumption to clean energy sources to 25% starting in November

Technoble Co., Ltd. (Head office: Kitahorie, Nishi-ku, Osaka City; President: Shigetoyo Sawaki) has been engaged in the research, development, manufacture, and sale of functional cosmetic ingredients since its establishment in 1961, and celebrated its 60th year in September 2021. On October 23, 2021, Science Park Kyoto (Seika-cho, Kyoto Prefecture), a new production plant and research and development base that has been in operation since December 2018, received approval to manufacture COSMOS-certified products, the global standard for organic cosmetic ingredients, and established a system to provide functional materials that are more eco-friendly. The company is now ready to provide more eco-friendly functional materials.

In addition, from August 4, 2021, 15% of the electricity consumed at the Science Park Kyoto has been converted to renewable energy sources, and from November 4 of the same year, we plan to increase this to 25%. As a result, we have succeeded in converting a quarter of the electricity consumed at the plant to renewable energy sources, and we will be able to reduce CO2 emissions by 25% compared to before the introduction of renewable energy.

Technoble will further strengthen its actions in response to the SDGs, which are being promoted in the cosmetics industry, and will continue to contribute to the reduction of environmental impact in the future.
